

You are a creative teacher aware of the importance of protecting the oceans, deforestation and air pollution, but need help presenting this to children? Then you are in a right place!

1.

Pedagogical Sequences

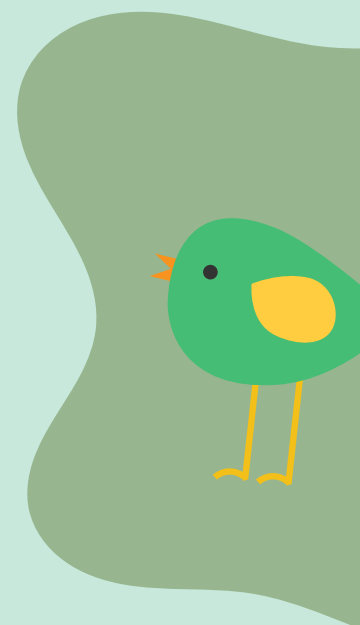

The GreenGUARDens team has provided 16 Pedagogical Sequences to give you an idea of how to organize a lesson. Three very important, but also complex topics are covered in an interesting and understandable way for children.

2.

Structure of plans

The plan suggests the materials you need for the activity, as well as useful links to help you prepare as well as possible. There are also advices on how to adapt the activity to all children, as well as various sustainability tips.

3.

Interactive games

Each interactive activity is described step by step. Some of the activities are role play, memory game, treasure hunt, guessing game, but also a visit to the forest or park. It is recommended that children make all the necessary costumes and play equipment themselves (with the help of teachers) and use recycled materials such as old paper, cardboard, plastic that they can bring from home.

4.

Piloting Lesson plans

Piloting of these lessons will begin in February in Serbia, Germany, Romania, Italy and Cyprus. This means that educators will try these games with their kindergarten children. Educators will have the opportunity to try these games with children until June. They will give us their feedback directly from practice, as well as children's impressions of the games.

5.

Are you interested in participating? Contact us!

If you want to try these interactive games with children in your kindergarten, contact your national coordinator (name and email here) and join the Lesson plans piloting.

6.
